BHONSALE KNOWLEDGE CITY'S

Yashwantrao Bhonsale College of Pharmacy

A/ P: Charathe, Tal: Sawantwadi, Dist.: Sindhudurg,
Maharashtra- 416 510 (M.S.)

Vol. XII, Issue I

Website: www.sybespharmacy.com; Email ID: ybpharmacy@gmail.com
Contact No.: 02363-272233, 272299

Approved by AICTE, PCI, New Delhi, Gov. of Maharashtra, DTE. NAAC Accredited with B+ 2.71 CGPA (1st cycle)
Affiliated to Mumbai University (B. Pharm, M. Pharm) and MSBTE (D. Pharm)

CHAIRMAN'S DESK

Yashwantrao Bhonsale College of Pharmacy (YBCP) is the first ever Pharmacy College in Sindhudurg district introducing pinnacle of excellence in pharma education and research.

Bhonsale Knowledge City campus is situated amidst idyllic hills & lush green ambience to increase the harmony between study and nature. To cater the need of technical & professional education in Konkan region especially in Sindhudurg district, YBCP commenced from June 2015 with a state of art ultra-modern infrastructure offering B. Pharmacy, D. Pharmacy and M. Pharmacy courses.

Bhonsale Knowledge City is having all types of facilities like hostel, mess, canteen, sports ground, ATM & transportation. In a very short span YBCP has gained a very high reputation and public faith for its honest & transparent management. It has taken a huge stride towards providing the advance technical education to each & every rural student of the region.

Mr. Achyut K. Sawantbhonsale
Hon. Executive Chairman

PRINCIPAL'S DESK

Dr. Vijay A. Jagtap
Principal

It gives me an immense pleasure to present before you the college information in form of newsletter. Yashwantrao Bhonsale College of Pharmacy (YBCP) is the first ever Pharmacy College in Sindhudurg district introducing pinnacle of excellence in pharma education and research. The commitment for total quality management (TQM) and discipline is prime slogan and motto of our college.

YBCP has excellent infrastructure and an experienced and dedicated team of faculty and staff. Though in its nascent stages, the Institute is well equipped and complies with all requirements of the AICTE, DTE and Mumbai University. The field of Pharmacy is redefining itself to meet 21st century healthcare needs, but at YBCP our primary focus is the integration of patient care, ethics, and knowledge. We are committed to deliver quality pharmacy education in order to develop students who will be professionally, intellectually adept and socially responsible.

So join with us to grow and to take pharmacy profession as a satisfying and rewarding career option!

EDITOR'S MESSAGE

We are happy to inform all the readers that we have published the 12th volume of Pharmaphile. Here at Yashwantrao Bhonsale College of Pharmacy, we believe in creating opportunities and taking up new challenges to move forward in life with zeal.

With such enthusiasm, YBCP participated in many, more achievements are certain to take place. We create opportunities everyday with our enthusiasm for life as we just do not wait for circumstances to be ideal and gain experiences which leads us towards growth.

This newsletter will be a medium to provide proper acknowledgement and respect all of these efforts and its results. This newsletter was one such cherished work that had its roots in the persuasion.

We hope you enjoy every stop of this tour of college today. We welcome your feedback and will see you again in next term with new issue.

Happy Reading !

Ms. Manaswi Sawant
Assistant Professor

Pranita Pawar
Assistant Professor

Ms. Supriya B. Rawool
Lecturer

VISION :

Provide pharmacy education to our rural students that optimizes the health and wellness of individuals and communities.

MISSION :

1. Foster a culture of inclusivity that attracts and retains diverse student, faculty and staff.
2. Disseminate transformative pharmacy practice models through effective infrastructure and learning.
3. To enrich social values by being a torch-bearer of civility, diversity and mutual respect in our vicinity.

FORMULATION AND EVALUATION OF FLOATING TABLET OF RANTIDINE HCL USING NATURAL GUM

Roshan Ahire¹, Gauri Bhivshet², Dr. Rohan Barse³, Dr. Vijay Jagtap⁴

Department of pharmaceuticals, Yashwantrao Bhonsale College of Pharmacy, Sawantwadi, Maharashtra, India

Abstract

The aim of this research is to develop a floating sustained release rantidine hydrochloride drug delivery system tablets. Floating tablets of drug Rantidine hydrochloride have been prepared by varying the amount of the drug in the matrix and thereby increase its bioavailability. Floating matrix tablets of rantidine hydrochloride were prepared by direct compression technique involving a combination of hydroxy propyl methyl cellulose (HPMC), xanthan gum and karaya gum as an polymer and sodium bicarbonate is used as generating agent. The floating tablets have been assessed for weight variation test hardness, thickness, friability, swelling index, in vitro floating ability, floating lag time. The natural karaya gum which is swellable hydrophilic polymer is used to control drug release. The results showed that the optimized formulation F1 containing 20% karaya gum 40 mg and 20% HPMC 70 mg had good floating property and shorter floating lag time and sustained drug release for 12 hours.

Keywords: Rantidine hydrochloride, karaya gum, HPMC, floating tablets, Release kinetics.

Introduction

Tablets are the most commonly used dosage forms due to their suitability for self-administration, compactness easy to handle and ease of manufacture. However, oral administration has limited oral bioavailability due to several pharmacokinetic factors. Rapid and erratic gastrointestinal transit could result in incomplete release of the drug from the device above the absorption site, leading to a reduction in the effectiveness of the administered dose. "Gastrointestinal delay factor (GIDF)" can be developed to increase the retention time of drug in the stomach. These systems result in the field of stomach for several hours and can therefore significantly increase the residence time of drugs in the stomach. Prolonged retention in the stomach improves bioavailability, reduces drug waste, and improves the solubility of drugs that are less soluble in the high pH environment of the small intestine. Rantidine hydrochloride (RHC) is a histamine H₂-receptor antagonist. It is widely prescribed for active duodenal ulcers, gastric ulcers, Zollinger-Ellison syndrome, gastroesophageal reflux disease and esophageal esophagitis. The recommended dose of rantidine for adults is 150 mg twice daily or 300 mg once daily. Effective treatment of esophageal esophagitis requires the administration of 150 mg of rantidine 4 times a day. The usual dose of 150 mg can inhibit gastric acid secretion for up to 5 hours, but not for up to 10 hours. An alternative dose of 300 mg leads to plasma fluctuations; therefore, an extended release form of RHC is desirable. The short biological half-life of the drug (1.5 to 3 hours) also favors the development of an extended release formulation.

A traditional sustained-release oral formulation releases most of the drug in the colon, so the drug should have an absorption window either in the colon or throughout the gastrointestinal tract. Rantidine is absorbed only in the initial part of the small intestine and has 50% absolute bioavailability. In addition, metabolism of rantidine in the colon is partly responsible for the poor bioavailability of rantidine from the colon. These properties of RHC do not favor the traditional sustained-release delivery approach. Thus, clinically acceptable sustained release design forms of RHC prepared by conventional technology may not be successful.

When it comes to leadership, small deeds matter. Begin with modest, manageable projects and maintain open communication and openness. When working with new people or teams, the leader should be accountable for properly communicating intentions and ensuring that each member completely understands their goals and roles. Considering these qualities, and as under the leadership of Dr. Vijay A. Jagtap, Principal, Yashwantrao Bhoale College of Pharmacy, Sawantwadi has achieved a remarkable milestone and recognized by NAAC with the grade in the first cycle. Yashwantrao Bhoale College of Pharmacy, Sawantwadi is the first institute who received such type of recognition as soon as it is eligible i.e., after 60th year of establishment. With the cordial of the same, Dr. Vijay A. Jagtap has been honored with the "Silver Leader" award by the channel "Konsanand Live" for his remarkable work in the field of education in Mumbai. On the occasion of the 50th anniversary of Maharashtra State Branch, the award was given to Dr. Jagtap in the presence of Sindhudurg District Guardian Minister as well as Minister of Maharashtra State for Public Works, Food Civil Supply and Consumer Protection on 26th Mar 2023.

18th August 2023: NSS Cell of Yashwantrao Bhonsale College of Pharmacy and Yashwantrao Bhonsale College of D Pharmacy, Sawantwadi in collaboration with Electoral Office, Sawantwadi organized *Voter Registration Camp

DOI: <https://doi.org/10.22271/ijhm.2023.v11i5a.884>

Abstract

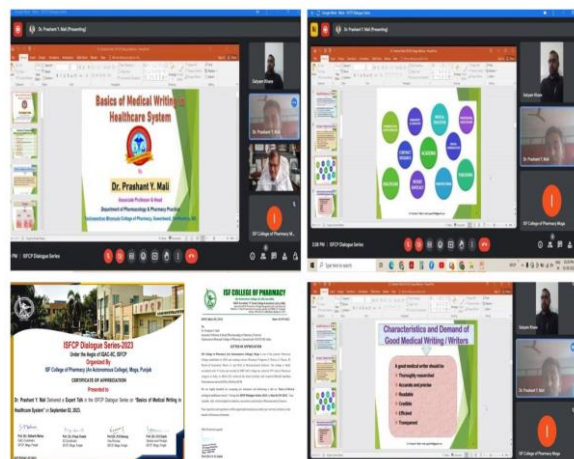

Albizia lebbek is herb belonging to the family Fabaceae. It has several phyto-constituents that show many health benefits. Traditionally it is used to cure fever, diarrhoea, dysentery, asthma, cold, cough, conjunctivitis, genital, dental problems and skin diseases. It has anti-microbial, anti-inflammatory, analgesic, anti-pyretic and immunomodulatory property. The plant contains alkaloids, flavones, flavonoids, tannins, saponins and phenolic compounds. Its leaves contain kumarpit. Pods contain a trisaponin albigenic acid.

Keywords: *Albizia lebbek*, anti-inflammatory, analgesic, asthma

Introduction

Indian Systems of Medicine have their roots in ayurveda. The potential of natural bioactive components is a major area of interest. There are various plant extracts that have curative benefits [1]. The wide range of disorders can be treated using herbal medicines. The World Health Organization (WHO) reports that traditional and folk medicines are used by about 80% of people in poor nations. Despite significant advancements in contemporary medicine, plants continue to play a significant role in the creation of novel medications. *Albizia lebbek*, also known as Shirish in Hindi is found in tropical and subtropical Asia, Africa, and Bangladesh. It is a leguminous plant from the Fabaceae family [2]. One of the conventional species of *Albizia* that is found all over the world is *Albizia lebbek*. It is frequently grown as an ornamental plant in tropical and subtropical regions. There are numerous data on medicinal properties [3]. It is a deciduous tree that typically grows in gardens or by the side of roads. Numerous phytochemicals including alkaloids, anthraquinones, essential oils, glycosides, flavonoids, glycerophenols, phytonutrients, saponins, steroids, and terpenoids are present in *Albizia lebbek*. This species exhibits excellent anti-inflammatory, anti-cancer, anti-mutagenic, anti-allergic, anti-hyperglycemic, anti-diabetic, wound healing, neuroprotective, anti-Parkinson's and anti-Alzheimer activities [4]. The *Albizia lebbek* tree has a number of medicinal properties, including those that are antiseptic, antitubercular, anti-fertility, anti-proliferative, anti-dysmenstric, anti-tubercular, anti-cancer, anxiolytic and anti-convulsant. The gum of *Albizia lebbek* is used to treat toothache [5-7]. Various plant parts, including the bark, stems, leaves, roots, flowers, and seeds, can be used to extract natural fibres [8]. Several diseases are treated with *Albizia lebbek* including depression, conjunctivitis, influenza, and fever [9]. In Asia, it is used as fuelwood plants and rehabilitation of damaged lands in addition to its therapeutic uses. It is also used in agroforestry. Use of *Albizia lebbek* has been traditionally used to remove toxins from the human body. It is also used to treat respiratory tract issues like allergies, asthma and common cold [10].

Reducing cardiovascular risk by treating chronic kidney dysfunction Prevention and treatment

¹Rakshanda S. Khorjuwenkar, ²Hrishikesh S. Kamble, ³Ajinkya T. Pawar, ⁴Salas S. Kamat

¹Assistant Professor, ^{2,3}Students
Department Of Pharmaceutical Chemistry
Yashwantrao Bhonsale College Of Pharmacy, Sawantwadi, India

Abstract: Chronic kidney disease (CKD) is a complex public health issue with high incidence, prevalence, and expensive management. It is linked to increased cardiovascular events, such as heart attacks, strokes, heart failure, and death, due to the gradual decline in glomerular filtration rate (eGFR). To reduce the frequency of critical cardiovascular events, clinicians should focus on preventing renal function deterioration. Early detection and targeted therapy are crucial to prevent the illness from progressing to severe stages. Most CKD patients were treated for a long time by controlling risk factors like diabetes and hypertension, and using renin-angiotensin aldosterone system inhibitors. However, this approach was only partially successful due to the steady decline in renal function. Innovative antidiabetic medications, such as gliflozins and incretins, have been shown to reduce eGFR, reduction in CKD patients and significantly impact cardiovascular prognosis by lowering clinical incidents.

Keywords: Chronic kidney disease (CKD), glomerular filtration rate, renin-angiotensin aldosterone system inhibitors, gliflozins, incretins, cardiovascular prognosis.

Abbreviations:

CKD - Chronic Kidney Disorder
CV - Cardio Vascular
GFR - Glomerular Filtration Rate
CHS - Cardiovascular Health Study
ARIC - Atherosclerosis Risk in Communities
CAD - Coronary Artery Disease
MI - Myocardial Infarction
LVH - Left Ventricle Hypertrophy
LV - Left Ventricle
PCI - Percutaneous Coronary Intervention
ACEI - Angiotensin-Converting Enzyme Inhibitor
CABG - Coronary Artery Bypass Grafting
COURAGE - Clinical Outcomes Utilizing Revascularization and Aggressive Drug Evaluation
CHF - Congestant Heart Failure
KDIGO - Kidney Disease Outcomes Quality Initiative

Introduction:

Chronic kidney disease (CKD) is a clinical syndrome secondary to the definitive change in function and/or structure of the kidney and is characterized by its irreversibility and slow and progressive evolution. Another important aspect is the pathology represents a higher risk of complications and mortality, especially cardiovascular-related¹.

Chronic kidney disease (CKD)² is defined as persistent kidney damage and/or glomerular filtration rate (GFR) below 60 mL/min/1.73m² for more than three months.³ Patients with CKD experience higher mortality and adverse cardiovascular (CV) event rates,^{4,5} which remain significant after adjustment for conventional coronary risk factors. This progressive CV risk associated with worsening renal function may be explained by other factors that become increasingly important with renal decline.⁶ Most investigations into nonconventional factors, such as inflammation, albuminuria, reduced vascular compliance, and homocysteine, is needed. CKD patients often experience "therapeutic nihilism," where there is a lack of appropriate risk factor modification and intervention.⁷ Evidence-based cardiovascular therapies and strategies may benefit these individuals, but more educational efforts are needed to reduce this therapeutic gap.

Causes:

The most frequent causes of chronic kidney disease (CKD) are diabetes and high blood pressure. In order to determine the cause of your kidney illness, your doctor will examine your medical history and perhaps do certain tests. The kind of treatment you get may depend on what caused your kidney condition.

Abstract

BCS Class II has a low aqueous solubility problem in pharmaceutical formulation. Hence to overcome this problem this research the was carried out for BCS Class II drug lornoxicam was selected to enhance the aqueous solubility by formulating nanosuspension with a polymer like Eudragit RS100, Eudragit RS100 and Poloxamer 407 as a stabilizer. The present study focuses on the polymer Eudragit RS100. A total of four formulations LRS-F1, LRS-F2, LRS-F3, LRS-F4 and LRS-F5 were prepared with a ratio of drug: polymer: stabilizer (1:1.5:5 & 1:2.0:5, 1:1:4 & 1:2:14RS-F4 formulation was found to be optimized formulation with 90.00 - 100 nm particle size & 11.20 cps potential and % drug release at the end of 10 hrs was found to be 96.88 % with the increase in the dissolution/saturation solubility of 70.86±0.09 µg/mL of poorly water-soluble lornoxicam (reported solubility with 14.28 µg/mL, µg/mL). The amount incorporated was found to be 99.74 % with an optimized formulation. Moreover, the physical appearance of the nanosuspension was found to be up to the mark confirming that the nanosuspension is stable and has no crystal growth or crystal development with optimized formulation at a temperature of 4 °C for 3 months. Poloxamer 407 as a stabilizer.

Keywords: Nanosuspension, Lornoxicam, Quassi emulsification solvent diffusion, Class II drug, solubility Enhancement, Bioavailability.

1. Introduction

One of the predominant limitations to the improvement of tremendously mighty pharmaceuticals is the terrible water solubility of many drugs. Approximately 40% of capacity new drugs recognized with the aid of pharmaceutical companies are poorly water soluble, which significantly hinder their medical translations [1]. Nanosuspensions are aqueous suspensions containing one or numerous submicron-sized drug materials and suitable stabilizers. Stabilizers consist of excipients that permit nano grinding of the drug particles, save you crystal boom or nanoparticle aggregation at some stage in storage, pH-buffering materials, preservatives, and different additives that can be wished for similar processing or management to patients (e.g., sweeteners, colorants) [2,3].

Preparation Of Nanosuspensions

The different techniques are used to prepare nanosuspension these are as follows

19th November 2023: SENSE Club of Yashwantrao Bhonsale College of Pharmacy Sawantwadi invites you to celebrate *NATIONAL PHARMACY WEEK 2023* From 19th to 25th November 2023.

MS received 24 February 2023; accepted 22 August 2023

Abstract. COVID-19 inflicted by the SARS-CoV-2 virus has created mayhem across the globe and has afflicted socio-economic, political and cultural aspects of every nook of the world. Notwithstanding, the ensuing COVID-19 waves are still approaching and sapping the economies of developed and developing worlds. Nanotechnology-driven interventions in COVID-19 may facilitate tripping in the bud at an early stage, consequently managing the menace of the virus. Nanostructures, notably luminescent carbon/quantum dots (CQDs), are potential nanomedicines in the field of theranostics and pharmaceuticals. They have stood the test of time due to their ease of synthesis, minimal toxicity, significant biocompatibility, tunable fluorescence, surface tunability, excellent photochemical stability and good hydrophilicity. In this mini-review, we have considered the recent findings of CQDs as potential nano-theranostics against COVID-19. Furthermore, we have also discussed antiviral modes of different CQDs. This mini-review will provide brief oversight and offer a new strategy to develop CQD-based antiviral agents for future-ready pandemics.

22nd December 2023: Glimpses of Industrial Visit* Students of Third Year B. Pharm (Division B) visited Blossom Pharmaceuticals at Thivim Industrial Estate, Karaswada Mapusa Goa.

21st December 2023: Glimpses of Expert Session on Career Opportunities in Healthcare Sector, 21st December 2023* ASPIRE CLUB* of Yashwantrao Bhonsale College of Pharmacy, Sawantwadi organized an Expert Session on *Career Opportunities in Healthcare Sector

22nd December 2023: MOU with LNCT University, Bhopal, Yashwantrao Bhonsale College of Pharmacy signed Memorandum of Understanding (MoU) with LNCT University, Bhopal on 21st December 2023 to provide for an exchange of faculty and students

22nd December 2023: Glimpses of "Ashavadi sanvand"
